

Developing a Technology Enhanced Lesson Plan

Technology provides educators with creative tools for designing, implementing, and assessing classroom instructional programs. When developing technology enhanced lesson plans, it is important to remember that our goal is not to teach technology in isolation, but to use technology as an integral component of a well-designed instructional program. The following information is provided to assist participants in developing lesson plans in which technology is used to support the instructional program: Steps to Developing a Technology Enhanced Lesson Plan:

- Determine the topics that you are going to teach based on state and local standards, individual student needs, and student interests.
- Determine the primary and secondary learning outcomes.
- Develop procedures that will be used in implementing the activities of the lesson. Specify the amount of time that you anticipate that it will take to implement the lesson.
- Identify the materials and equipment that you will need to implement the lesson.
- Identify the instructional and assistive technology solutions you need to implement the lesson.
- Determine the method for assessing student performance.
- Identify any extension activities that will support student performance.
- Identify any remediation activities that will support student performance.
- Identify accommodations and modifications that support student performance.
- Identify resources relevant to lesson.
